## STATISTICAL DATA

## Edited by <br> ÉVA CZETHOFFER

Compiled by
JÁNOS KÖLlő
JUDIT LAKATOS JÓZSEF TAJTI

Statistical tables on labour market trends that have been published in The Hungarian Labour Market Yearbook since 2000 can be downloaded in full from the website of the Research Centre for Economic and Regional Studies: http://adatbank.krtk.mta. hu/tukor_kereso

1. Basic economic indicators
2. Population
3. Economic activity
4. Employment
5. Unemployment
6. Wages
7. Education
8. Labour demand indicators
9. Regional inequalities
10. Industrial relations
11. Welfare provisions
12. The tax burden on work
13. International comparison
14. Description of the main data sources

## Data sources

CIRCA Communication \& Information Resource Centre Administrator
KSH Table compiled from regular Central Statistical Office publications [Központi Statisztikai Hivatal]
KSH IMS CSO institution-based labour statistics [KSH intézményi munkaügyi statisztika]
KSH MEF CSO Labour Force Survey [KSH Munkaerő-felmérés]
KSH MEM CSO Labour Force Account [KSH Munkaerő-mérleg]
NAV National Tax and Customs Administration [Nemzeti Adó- és Vámhivatal]
NEFMI Ministry of National Resources [Nemzeti Erőforrás Minisztérium]
NEFMI EMMI STAT Ministry of National Resources, Educational Statistics [Nemzeti Erőforrás Minisztérium, Oktatásstatisztika]
NFA National Market Fund [Nemzeti Foglalkoztatási Alap]
NFSZ National Employment Service [Nemzeti Foglalkoztatási Szolgálat]
NFSZ BT National Employment Service Wage Survey [NFSZ Bértarifa-felvétel]
NFSZ IR NFSZ integrated tracking system [NFSZ Integrált (nyilvántartási) Rendszer]
NFSZ PROG National Employment Service Short-term Labour Market Projection Survey [NFSZ Rövid Távú Munkaerőpiaci Prognózis]
NFSZ REG National Employment Service Unemployment Register [NFSZ regisztere]
NGM Ministry of National Economy [Nemzetgazdasági Minisztérium]
NMH National Labour Office [Nemzeti Munkaügyi Hivatal]
NSZ Population Census [Népszámlálás]
NYUFIG Pension Administration [Nyugdíjolyósító Igazgatóság]
ONYF Central Administration of National Pension Insurance [Országos Nyugdíjbiztosítási Főigazgatóság]
TB Social Security Records [Társadalombiztosítás]

## EXPLANATION OF SYMBOLS

${ }^{\text {a }}$ Annual average figures.
Note: Up to the year 1999, weighting is based on the 1990 population census. From 2000 onwards the 2001 population census is used in its original form. After the 2011 Census the post-2000 population weights have been updated using the new census data. From December 2014 grossing up of LFS data has been based on the adjusted population number of the 2011 census. To ensure comparability previous estimates have been modified by the new weighting system dating back to 2006.
Data on 'employed' includes conscripts and those working while receiving pension or child support. The data on students for 1995-97 are estimates.
'Other inactive' is a residual category calculated by deducting the sum of the figures in the indicated categories from the mid-year population, so it includes the institutional population not observed by MEF. The population weights have been corrected using the 2011 Census data.
Source: Pensioners: 1980-91: NYUFIG, 1992-: KSH MEF. Child care recipients: up to the year 1997 TB and estimation, after 1997 MEF. Unemployment: 1990-91: NFSZ REG, 1992-: KSH MEF.

Figure 5.2: Intensity of quarterly flows between labour market status, population between 15-64 years

Note: The calculations were carried out for the age group between 15-64 based on KSH labour force survey microdata. The probability of transition is given by the number of people who transitioned from one status to the other in the quarter, divided by the initial size of the group in the previous quarter, which were then corrected to preserve the consistency of stock flows. The red curves show the trend smoothed using a 4th degree polynomial.

${ }^{\text {a }}$ Since 1st of November, 2005: database of registered jobseekers. From the 1st of November, 2005 the Employment Act changed the definition of registered unemployed to registered jobseekers. After termination of compilation of Balance of Labour Force in 2016 the number of economically active population - that was the base of the registered unemployment rate - has been derived from the Labour Force Survey. At the same time data have been corrected retrospectively.
Note: the denominator of registered unemployment/jobseekers' rate in the economically active population on 1st January the previous year.

[^4]${ }^{\text {c }}$ Only recipients who are in the NFSZ register. Those receiving the discontinued income support supplement were included in the number of those receiving income support supplement up to the year 2004, and in the number of those receiving regular social assistance from 2005 to 2008. From 2009, those receiving social assistance were included in a new support type, the on call support. This allowance was replaced by the wage replacement support from January 1, 2011, then from September 1, 2011, the name was changed to employment substitution support.
${ }^{d}$ Relative index: registered unemployment rate in the economically active population. From 1 st of November, 2005, registered jobseekers' rate in the economically active population.
${ }^{\mathrm{e}}$ The new IT system introduced at the NFSZ in 2008 made the methodological changes possible:

1) The filtering out of those returning after, or starting a break from, the number of those entering or leaving the different types of jobseeking support. The main reasons for a break are, - work for short time periods, receipt of child support (GYES) or TGYÁS, or involvement in training.
2) Taking into account in the previous period the number of those entrants for whom the first accounting of the jobseeking support was delayed due to missing documentation.
2008 data, comparable to 2009: 141.5 thousand people.

${ }^{\text {a }}$ Since 1st of November, 2005: jobseeker benefit recipients. From September 1, 2011, the system of jobseeking support changed.
${ }^{\mathrm{b}}$ Only recipients who are in the NFSZ register. Those receiving the discontinued income support supplement were included in the number of those receiving income support supplement up to the year 2004, and in the number of those receiving regular social assistance from 2005 to 2008 . From 2009, those receiving social assistance were included in a new support type, the on call support. This allowance was replaced by the wage replacement support from January 1, 2011, then from September 1, 2011., the name was changed to employment substitution support.
c Up to the year 2008 the number financed from the MPA Decentralized Base, since 2009 the number financed from MPA, TAMOP.
Public-type employment: community service, public service, public work programmes.
Wage subsidy: wage subsidy, wage-cost subsidy, work experience acquisition assstance to career-starters, support for em-
ployment of availability allowance recipients, part-time employment, wage support for those losing their job due to the crisis.
Other support: job preservation support, support to would-be entrepreneurs, contribution to costs related to commuting to work, job creation support, jobseeker's clubs.
${ }^{\mathrm{d}}$ The new IT system introduced at the NFSZ in 2008 made the methodological changes possible:

1) The filtering out of those returning after a break or starting a break from the number of those entering or leaving the different types of jobseeking support. The main reasons for a break are work for short time periods, receipt of child support (GYES) or TGYÁS, or involvement in training.
2) Taking into account in the previous period the number of those entrants, for whom the first accounting of the jobseeking support was delayed due to missing documentation.
2008 data, comparable to 2009: 134.1 thousand people.
${ }^{\mathrm{e}}$ In 2013, 18.1 thousand trainees were simultaneously involved in public works programmes.
Note: The closing numbers from October of each year. For the percentage data, the sum of those registered and those taking part in labour market programmes $\approx 100.0$.

${ }^{\text {a }}$ The data relate to people having completed their courses successfully.
${ }^{\mathrm{b}}$ Three months after the end of programmes.
${ }^{\mathrm{c}}$ Six months after the end of programmes.
${ }^{\text {d }}$ Suggested training: group training programmes for jobseekers organized by the NFSZ.
${ }^{\mathrm{c}}$ Accepted training: participation in programmes initiated by the jobseekers and accepted by NFSZ for full or partial support.
${ }^{f}$ Training for employed persons: training for those whose jobs are at risk of termination, if new knowledge allows them to adapt to the new needs of the employer.
${ }^{\mathrm{g}}$ Support to help entrepeneurship: support of jobseekers in the amount of the monthly minimum wage or maximum HUF 3 million lump sum support (to be repaid or not), aimed at helping them become individual entrepreneurs or self-employed.
${ }^{\mathrm{h}}$ Wage support: aimed at helping the employment of disadvantaged persons, who would not be able to, or would have a harder time finding work without support. The data on wage subsidies and labour cost subsidies exclude the programmes supporting job seeking school leavers and student work during summer vacation.
${ }^{\text {i }}$ Work experience-gaining support: the support of new entrants with no work experience for 6-9 months, the amount of the support is equal to $50-80 \%$ of the wage costs. The instrument was discontinued after December 31, 2006.. In 2009 they reintroduced the work experience gaining support for skilled new entrants, for employers who ensure employment of at least 4 hours a day and for 365 days. The amount of the support is $50-100 \%$ of the wage cost. Monitoring for the first exiters is available from 2011. The programme supporting the school to work transition of skilled school leavers was abolished in 2014.
${ }^{j}$ Further employment programmes: to support the continued employment of new entrants under the age of 25 for 9 months. Discontinued from December 31, 2006.

${ }^{\text {a }}$ The new IT system introduced at the NFSZ in 2008 made the methodological changes possible:

1) The filtering out of those returning after or starting a break from the number of those entering or leaving the different types of jobseeking support. The main reasons for a break are: work for short time periods, receipt of child support (GYES or TGYÁS), or involvement in training.
2) Taking into account in the previous period the number of those entrants, for whom the first accounting of the jobseeking support was delayed due to missing documentation.
The row of $2008^{\text {a }}$ contains the data from 2008 in the form comparable to the 2009 data.

${ }^{\text {a }}$ The drastic decrease in the number of training programmes offered was due to the centralization of decision-making regarding the financing of training programmes, and the concurrent new requirement according to which only training programmes with a verifiable direct effect on employment were approved. Due to these, the number of preventative and general knowledge training programmes among those supported decreased. The majority of training participants were enrolled within the framework of EU programmes.
Note: The significant growth in the number of trainees, during and following 2012, was predominantly explained by the inclusion into training of public works participants. The data for 2013 and 2014 make a distinction between those and other trainees.

Disability pensions and temporary provisions for disability groups 1-2, granted prior to 2012, have been transformed to 'disability allotments'. The provisions for permanent social benefit recipients born before 1955 have also been transformed to 'disability allotments'. Disability pensions and permanent social benefits granted before 2012 to the members of disability group 3 have been transformed to 'rehabilitation allotment'. The conditions of these provisions will be set in the framework of a complex revision of entitlement and eligibility.

Those persons are entitled to receive an old age pension who are at least of the age of the old age pension threshold indicated in the legislature - marked grey in the table - relevant to them (uniform for men and women), who have fulfilled the required number of years of service, and who are not insured. In the case of old age pension, the minimum service time is 15 years. The table displays the old age pension age threshold in the case of a "representative person". The cells show the age, based on the calendar year, of a person born in the given year.
Women who have accumulated at least 40 accrual years are entitled to a full old age pension,
regardless of their age. Following December 31, 2011 (legislature number CLXVII/2011) no pension can be granted prior to the old-age threshold. At the same time, the legislature continues to provide previously determined allowances under different legal titles (pre-retirement age provision, service salary, allotments for miners and ballet dancers).
Prior to 2012, early retirement pensions included the following allowances: early and reducedamount early retirement pensions, pensions with age preference, miner's pension, artist's pension, pre-retirement age old age pension of Hungarian and EU MPs and mayors, prepension, service pension of professional members of the armed forces.

${ }^{\text {a }}$ In 2010 the nominal tax rate was $17 \%$ for annual incomes lower than 5,000,000 HUF. For incomes higher than $5,000,001$ HUF it was 850,000 HUF plus $32 \%$ of the amount exceeding $5,000,000$ HUF. In 2011, the nominal tax rate was $16 \%$. The joint tax base is the amount of income appended with the tax base supplement (equal to $27 \%$ ).
${ }^{\mathrm{b}}$ In 2012 the nominal tax rate was $16 \%$. The joint tax base is the amount of income appended with the tax base supplement.
The amount of the tax base supplement:

- does not need to be determined for the part of the income included in the joint tax base that does not surpass 2 million 424 thousand HUF,
- should be determined as $27 \%$ of the part of the income included in the joint tax base that is over 2 million 424 thousand HUF.

${ }^{\text {a }}$ Wage paid at the amount in accordance with the gross daily minimum wage column and in the case of work performed with a temporary work booklet. The basis for the comparison with the minimum wage is the assumption that employers pay temporary workers the smallest possible amount.
${ }^{\mathrm{b}}$ According to regulations pertaining to the first half of 2009.
c From April 1st, 2010. the temporary work booklets and the public contribution tickets were discontinued, these were replaced by simplified employment.
Note: The tax wedge is the quotient of the total public burden (tax and contribution) and the total wage cost, it is calculated as: tax wedge $=($ total wage cost - net wage $) /$ total wage cost.

Notes: Up to the year 1999, sectors employing unskilled labour usually received an extension of a few months for introducing the new minimum wage. The guaranteed wage minimum applies to skilled employees, the minimum wage and the skilled workers minimum wage are gross amounts.
The minimum wage is exempt from the personal income tax from September 2002. This policy resulted in a $15.9 \%$ increase in the net minimum wage.
APW: mean wage of workers in the processing industry, based on the NFSZ BT. In 1990, the data is the previous year's data, indexed (since there was no NFSZ BT conducted in 1990). ${ }^{\text {a }}$ Tax burden on work and contributions as a ratio of tax revenue from all tax forms.
${ }^{\mathrm{b}}$ The implicit tax rate is the quotient of the revenue from taxes and contributions pertaining to work and the income derived from work.
c The tax wedge is the quotient of the total public burden (tax and contribution) and the total wage cost, it is calculated as: tax wedge $=$ (total wage cost - net wage)/total wage cost.
${ }^{\mathrm{d}}$ The tax wedge of the minimum wage is the 2009 annual mean (the contributions decreased in June).

## DESCRIPTION OF THE MAIN DATA SOURCES

The data have two main sources in terms of which office gathered them: the regular institutional and population surveys of the Hungarian Central Statistical Office (CSO, in Hungarian: Központi Statisztikai Hivatal, KSH), and the register and surveys of the Na tional Employment Service (in Hungarian: Nemzeti Foglalkoztatási Szolgálat, NFSZ).

## MAIN DATA SOURCES OF THE KSH

## Labour Force Survey - KSH MEF

The KSH has been conducting a new statistical survey since January 1992 to obtain ongoing information on the labour force status of the Hungarian population. The MEF is a household survey which provides quarterly information on the non-institutional population aged $15-74$. The aim of the survey is to observe employment and unemployment according to international statistical recommendations based on the concepts and definitions recommended by the International Labour Organization (ILO), independently from existing national labour regulations or their changes.

In international practice, the labour force survey is a widely used statistical tool to provide simultaneous, comprehensive, and systematic monitoring of employment, unemployment, and underemployment. The survey techniques minimise the subjective bias in classification (since people surveyed are classified by strict criteria), and provide freedom to also consider national characteristics.

In the MEF, the surveyed population is divided into two main groups according to the economic activity performed by them during the reference week (up to the year 2003, this was always on the week containing the 12 th of the month): economically active persons (labour force), and economically inactive persons.

The group of economically active persons consists of those in the labour market either as employed or unemployed persons during the reference week.

The definitions used in the survey follow ILO recommendations. According to these, those designated employed are persons who, during the reference week worked one hour or more earning some form of income,
or had a job from which they were only temporarily absent (on leave, illness, etc.).

Work providing income includes all activities that: - result in monetary income, payment in kind, or

- that were carried out in the hopes of income realized in the future, or
- were performed without payment in a family business or on a farm (i.e. unpaid family workers).
From the survey's point of view the activities below are not considered as work:
- work done without payment for another household or institution (voluntary work),
- building or renovating of an own house or flat, internships tied to education (not even if it is compensated), - housework, including work in the garden. Work on a person's own land is only considered to generate income if the results are sold in the market, not produced for self-consumption.
Persons on child-care leave are classified - based on the 1995 ILO recommendations for transitional countries determined in Prague - according to their activity during the survey week.

Since, according to the system of national accounting, defense activity contributes to the national product, conscripts are generally considered as economically active persons, any exceptions are marked in the footnotes of the table. The data regarding the number of conscripts comes from administrative sources. (The retrospective time-series based on CSO data exclude conscripted soldiers. This adjustment affects the data until 2003, when military conscription was abolished.)

Unemployed persons are persons aged 15-74 who: - were without work, i.e. neither had a job nor were at work (for one hour or more) in paid employment or selfemployment during the reference week,

- had actively looked for work at any time in the four weeks up to the end of the reference week,
- were available for work within two weeks following the reference week if they found an appropriate job.

Those who do not have a job, but are waiting to start a new job within 30 days (since 2003 within 90 days) make up a special group of the unemployed.

Active job search includes: contacting a public or private employment office to find a job, applying to an employer directly, inserting, reading, answering advertisements, asking friends, relatives or other methods.
The labour force (i.e. economically active population) comprises employed and unemployed persons.

Persons are defined economically inactive (i.e. not in the labour force) if they were neither employed in regular, income-earning jobs, nor searching for a job, or, if they had searched, had not yet started work. Passive unemployed are included here - those who would like a job, but have given up any active search for work, because they do not believe that they have a chance of finding any.

The Labour Force Survey is based on a multi-stage stratified sample design. The sample design strata were defined in terms of geographic units, size categories of settlements and area types such as city centres, outskirts, etc. The sample has a simple rotation pattern: any household entering the sample at some time is expected to provide labour market information at six consecutive quarters, then leaves the sample forever. The quarterly sample is made up of three monthly sub-samples. In each sampled dwelling, labour market information is collected from each household and each person aged 15-74 living there. The number of addresses selected for the sample in a quarter is about 38 thousand.

Grossing up of LFS data has been carried out monthly on the basis of the population number of the last Census corrected with the extrapolated population numbers. Estimated totals or levels based on the LFS sample are computed by inflating and summing the observations by suitable sample weights. The weights to the estimation are made in two steps. First the primary weights are calculated for the 275 strata of the sample, then these weights need to be adjusted for non-response by updated census counts in cross-classes defined by age, sex and geographic units. In the correction procedure the further calculated population and dwelling numbers have a key role.
Since 2003, the weights used to make the sample representative are based on the 2001 census population record base. At the same time, the 2001-2002 data was recalculated and replaced as well. The LFS-based time series published in this volume use the following weighting schemes: (i) in 1992-1997 the weights are based on the 1990 Census (ii) in 1998-2001 the weights based on the 1990 Census have been corrected using data of the 2001 Census (iii) in 2002-2005 the weights are based on the 2001 Census (iv) from 2006 onwards
the weights based on the 2001 Census have been corrected using the 2011 Census.

## Institution-Based Labour Statistics - KSH IMS

The source of the earnings data is the monthly (annual) institutionallabour statistical survey. The sample frame covers enterprises with at least 5 employees, and public and social insurance and non-profit institutions irrespective of the staff numbers of employees.

The earnings data relate to the full-time employees on every occasion. The potential elements of the prevailing monthly average earnings are: base wage, allowances (including the miner's loyalty bonus, and the Széchenyi and Professor's scholarships), supplementary payments, bonuses, premiums, and wages and salaries for the 13th and further months.

Net average earnings are calculated by deducting from the institution's gross average earnings the employer's contributions, the personal income tax, according to the actual rates (i.e. taking into account the threshold concerning the social security contributions and employee deductions). The personal income tax is calculated based on the actual withholding rate applied by the employers when disbursing monthly earnings in the given year.

The size and direction of the difference between the gross and the net (after-tax) income indexes depends on actual annual changes in the tax table (tax brackets) and in the tax allowances. Thus the actual size of the differences are also influenced by the share of individuals at given firms that fall outside the bracket for employee allowances.
The indexes pertain to the comparable sample, taking changes in the definitions, and of the sample frame into account. The KSH traditionally publishes the main average index as the earnings growth measure. Thus the indicator of change in earnings reflects both the changes in the number of observations and the actual earnings changes simultaneously. The change of net real earnings is calculated from the ratio of net income index and the consumer price index in the same period.

Non-manual workers are persons with occupations classified by the standardized occupational code (FEOR) in major groups 1-4., manual workers are persons with occupations classified in major groups 5-9.

## KSH Strike statistics

The CSO data cover strikes with at least 10 participants and token strikes lasting for at least 2 hours.

## Labour Force Accounting Census - KSH MEM

Before the publication of the MEF, the annual MEM gave account of the total labour force in the time period between the two censuses.

The MEM, as its name shows, is a balance-like account that compares the labour supply (human resources) to the labour demand at an ideal moment (1 January). Population is taken into account by economic activity, with a differentiation between statistical data of those of working age and the population outside of the working age. Source of data: Annual labour survey on employment since 1992 of enterprises and of all government institutions, labour force survey, census, national healthcare records, social security records, and company registry. Data on unemployment comes from the registration system of the NFSZ.

## Source of educational data

Data on educational institutions are collected and processed by the Ministry of Human Capacities (or the at all times ministry responsible for education). Data surveys relating to education have undergone changes both in content and in methodology since the 2000/2001 school-year (the paper-based questionnaires were replaced by the electronic data collection system, which in the year of transition temporarily has resulted in lower reliability data); they follow the structural and activity system laid down by Acts LXXIX. and LXXX. of 1993 on education. The observed units of the data survey are the educational institutions, and the activities and educational tasks within them. Since the 2000/2001 school-year October 1st and October 15th of every year was designated as the nominal date of the data survey (before 2000 it was a similar date, which nevertheless varied by school-types).

In the 2016/2017 school year significant transformations started in secondary education. In addition to changing the name of vocational institutions, the task they performed changed as well. The new name of special vocational schools is vocational school and special skills development school, the name of earlier vocational schools became secondary vocational school and that of earlier secondary vocational schools became vocational grammar school. In the new vocational schools pupils with special educational need who unable to make progress with the other pupils are prepared for vocational examinations; the special skills development schools provide preparation for SEN-students with moderate disability for commencing inde-
pendent life or the learning of work processes requiring simple training, which enable employment. In the new system secondary vocational schools students aquire a vocational qualification during the first 3 years, after which they have the opportunity to complete two further years preparing for final examination at secondary level then they can pass a maturity examination. After completing the first four years of vocational grammar schools, students pass a vocational grammar schoolleaving examination, during an additional year sutdents prepare for the vocational examination. There was no change in the case of secondary general schools. The content of secondary school preparing students for final examination at secondary level (maturity examination) has changed. Earlier the secondary general school and the secondary vocational school belonged in this category, in the new system the secondary vocational school, the secondary general school and the vocational grammar school together is meant by it. As a result, some of the education time series can no longer be resumed in their earlier forms.

## Former and current scheme of secondary education:

## Other data sources

Census data were used for the estimation of the employment data in 1980 and 1990. The aggregate economic data are based on national account statistics, the consumer's and producer's price statistics and industrial surveys. A detailed description of the data sources are to be found in the relevant publications of the KSH.

## MAIN NFSZ DATA SOURCES <br> Unemployment (Jobseekers') Register Database - NFSZ-REG

The other main source of unemployment data in Hungary - and in most of the developed countries - is the huge database containing so called administrative records which are collected monthly and include the individual data of the registered unemployed/ jobseekers.
The register actually includes all jobseekers, but from these, at a given point of time, only those are regarded as registered unemployed/jobseekers, who:

- had themselves registered with a local office of the NFSZ as unemployed/jobseekers (i. e. he/she has no job but wishes to work, for which they seek assistance from the labour market organisation).
- at the time of the examination (on the final day of any month), the person is not a pensioner or a full-time student, does not receive any rehabilitation provision or benefit, and is ready to co-operate with the local employment office in order to become employed (i.e. he/she accepts the suitable job or training offered to him/her, and keeps the appointments made with the local employment office's placement officer/counsellor/benefit administrator).
If a person included in the register is working under any subsidised employment programme on the closing day, or is a participant of a labour market training programme, her/his unemployed/jobseeker status is suspended.

If the client is not willing to co-operate with the local office, he/she is removed from the register of the unemployed/ jobseekers.

The data - i. e. the administrative records of the register - allow not only for the identification of date-related stock data, but also for monitoring flows, inflows as well as outflows, within a period.

The database contains the number of decrees pertaining to the removal or suspension of jobseeking benefits, the number of those receiving monetary support based on accounting items, support transactions, the exact date of entry and exit and the reason for the exit (for example, job placement, the end of entitlement, disqualification, entry into a subsidized employment programme, etc.), as well as the financial data of jobseeking benefits (for example, average monthly a mount, average support paid for the number of participants on the closing date, for exiters, and those who found placement).

The jobseeking benefit register can also monitor the average duration of the period of benefit allocation and the average monthly amount of the benefits allocated.

For the period between 1991 and 1996, the register also contains the stock and flow data of the recipients of new entrant's unemployment benefit. Between 19972005, the system also contained the recipients of preretirement unemployment benefit.

Jobseeking allowance recipients: from September 1, 2011 the conditions for determining and disbursing the jobseeking allowance changed. The two phases of the jobseeking allowance were discontinued and the period of entitlement decreased from 270 days to 90 days. Jobseekers needed to have at least 360 days of worktime counting towards entitlement in the 5 years prior to becoming a jobseeker (prior to September 1, 2011, this was 365 days in the previous 4 years). Its amount is $60 \%$ of the allowance base, but maximum the amount of the smallest mandatory wage on the first day of the entitlement (allowance base: the monthly average amount from the four calendar quarters preceding the submission of the application).
Jobseeking assistance recipients: from September 1, 2011 the conditions for determining and disbursing the jobseeking assistance changed. The "a" and " b " type of benefit were discontinued, jobseekers can still request the " c " type of benefit under the title of pre-retirement jobseeking benefit, but the period of entitlement (and depletion) of at least 140 days decreased to 90 days.

Regular social assistance recipients: those from among the regular registered jobseekers who are of active age and are in a disadvantaged labour market position, and who receive social assistance to complement or substitute their income. From January 1, 2009, those receiving regular social assistance were included in two categories: regular social assistance recipients, and recipients of on call support. This support was replaced by a new type of assistance, the wage replacement support from January 1, 2011, then from September 1, 2011, the name was changed to employment substitution support. (Legislation III. of 1993 pertaining to social management and social assistance).

Based on the records of labour demand needs reported to the NFSZ, the stock and flow data of vacancies are also processed and published for each month.

Furthermore, detailed monthly statistics of participation in the different active programmes, number of participants, and their inflows and outflows are also prepared based on the assistance disbursed.

The very detailed monthly statistics - in a breakdown by country, region, county, local employment office service delivery area and community - build on the secondary processing of administrative records that are generated virtually as the rather important and useful "by-products" of the accomplishment of the NFSZ's main functions (such as placement services, payment of benefits, active programme support, etc.).

The NFSZ (and its predecessors, i. e. NMH, OMK National Labour Centre, OMMK and OMKMK) has published the key figures of these statistics on a monthly basis since 1989. The denominators of the unemployment rates calculated for the registered unemployed/ jobseekers are the economically active population data published by the KSH MEM.

The figures of the number of registered unemployed/ jobseekers and the registered unemployment rate are obviously different from the figures based on the KSH MEF. It is mainly the different conceptual approach, definition, and the fundamentally different monitoring/measuring methods that account for this variance.

## Short-Term Labour Market Projection Surveys - NFSZ PROG

At the initiative and under the coordination of the NFSZ (and its legal predecessors), the NFSZ PROG has been conducted since 1991, twice a year, in March and September, by interviewing over 7,500 employers. Since 2004 the survey is conducted once a year, in the month of September.

The interviews focus on the companies' projections of their material and financial processes, their development and human resource plans, and they are also asked about their concrete lay-off or recruitment plans, as well as their expected need for any active labour market programmes.

The surveys are processed from bottom up, from the service delivery areas, through counties, to the whole country, providing useful information at all levels for the planning activities of the NFSZ.

The survey provides an opportunity and possibility for the regions, the counties and Budapest to analyse in greater depth (also using information from other sources) the major trends in their respective labour markets, to make preparations for tackling problems that are likely to occur in the short term, and to effectively meet the ever-changing needs of their clients.

The forecast is only one of the outputs of the survey. Further very important "by-products" include regular
and personal liaison with companies, the upgraded skills of the placement officers and other administrative personnel, enhanced awareness of the local circumstances, and the adequate orientation of labour market training programmes in view of the needs identified by the surveys.

The prognosis surveys are occasionally supplemented by supplementary questions and sets of questions to obtain some further useful information that can be used by researchers and the decision-makers of employment and education/ training policy.

From 2005, the surveys are conducted in cooperation with the Institute for Analyses of the Economy and Entrepreneurship of the Hungarian Chamber of Industry and Commerce (in Hungarian: Magyar Kereskedelmi és Iparkamara Gazdaság- és Vállalkozáskutató Intézet, MKIK GVI), with one additional benefit being that with the help of the surveyors of the Institute, the sample size has increased to nearly 8,000 .

Wage Survey Database - NFSZ BT
The NFSZ (and its legal predecessors) has conducted since 1992, once a year, a representative survey with a huge sample size to investigate individual wages and earnings, at the request of the Ministry of National Economy (and its legal predecessors).

The reference month of data collection is the month of May in each year, but for the calculation of the monthly average of irregularly paid benefits (beyond the base wage/salary), $1 / 12$ th of the total amount of such benefits received during the previous year is used.

In the competitive sector, the data collection only covered initially companies of over 20 persons; it was incumbent on all companies to provide information, but the sample includes only employees born on certain dates in any month of any year.

Data collection has also covered companies of 10-19 since 1995, and companies of 5-9 have been covered since 2000, where the companies actually involved in data collection are selected at random (ca. 20 per cent), and the selected ones have to provide information about all of their full-time employees.

Data on basic wages and earnings structure can only be retrieved from these surveys in Hungary, thus it is, in practice, these huge, annually generated databases that can serve as the basis of the wage reconciliation negotiations conducted by the social partners.

In the budgetary sector, all budgetary institutions provide information, regardless of their size, in such a
way that the decisive majority of the local budgetary institutions - the ones that are included in the TAKEH central payroll accounting system - provide fully comprehensive information, and the remaining budgetary institutions provide information only about their employees who were born on certain days (regarded as the sample).

Data has only been collected on the professional members of the armed forces since 1999.

Prior to 1992, such data collection took place in every third year, thus we are in possession of an enormous database for the years of 1983, 1986 and also 1989.

Of the employees included in the sample, the following data are available:

- The sector the employer operates in, headcount, employer's local unit, type of entity, ownership structure.
- Employee's wage category, job occupation, gender, age, educational background.
Based on the huge databases which include the data by individual, the data is analysed every year in the following ways:
- Standard data analysis, as agreed upon by the social partners, used for wage reconciliation negotiations (which is received by every confederation participating in the negotiations).
- Model calculations to determine the expected impact of the rise of the minimum wage.
- Analyses to meet the needs of the Wage Policy De-
partment, Ministry of National Resources, for the analysis and presentation of wage ratios.
- Analyses for the four volume statistical yearbook (total national economy, competitive sector, budgetary sector, and regional volumes).
The entire database is adopted every year by the KSH, which enables the Office to also provide data for certain international organisations, (e.g. ILO and OECD). The NGM earlier the NMH also regularly provides special analyses for the OECD.

The database containing the data by individual allows for a) the analysis of data for groups of people determined by any combination of pre-set criteria, b) the comparison of basic wages and earnings, with special regard to the composition of the different groups analysed, as well as c) the analysis of the dispersion of the basic wages and earnings.

Since 2002, the survey of individual wages and earnings was substantially developed to fulfill all requirements of the EU, so from this time on it serves also for the purposes of the Structure of Earnings Survey (SES), which is obligatory for each member state in every fourth year. One important element of the changes was the inclusion of part-time employees in the sample since 2002.
SES 2002 was the first, and recently the databases of SES 2006 and 2010 were also sent to the Eurostat in anonymized form in accordance with EU regulations.

[^0]:    ${ }^{\text {a }}$ Annual average figures.
    Note: Up to the year 1999, weighting is based on the 1990 population census. From 2000 onwards the 2001 population census is used in its original form. After the 2011 Census the post-2000 population weights have been updated using the new census data. From December 2014 grossing up of LFS data has been based on the adjusted population number of the 2011 census. To ensure comparability previous estimates have been modified by the new weighting system dating back to 2006.
    Data on 'employed' includes conscripts and those working while receiving pension or child support. The data on students for 1995-97 are estimates.
    'Other inactive' is a residual category calculated by deducting the sum of the figures in the indicated categories from the mid-year population, so it includes the institutional population not observed by MEF. The population weights have been corrected using the 2011 Census data.
    Source: Pensioners: 1980-91: NYUFIG, 1992-: KSH MEF. Child care recipients: up to the year 1997 TB and estimation, after 1997 MEF. Unemployment: 1990-91: NFSZ REG, 1992-: KSH MEF.
